

Trunnion Mount Cylinders

Muncie Power's Trunnion Mount cylinders not only offer the mounting style that allows for increased capacity in the dump body by allowing for significant reduction or elimination of the dog house, but also many other features. With the strict machining tolerances, solid stop contact faces, and larger overlap between stages the Muncie Power cylinders are one of the strongest and most stable cylinders on the market.

Pin-Pin Cylinders

The combination of strict machining tolerances, solid stop contact faces, and larger overlap between the stages has resulted in one of the strongest and most stable cylinder columns currently available on the market. These improvements help to increase safety for dumping applications, helping to prevent accidents due to vehicle roll-over.
